

My Reading Coach Gold

Macintosh System Requirements

You can run My Reading Coach Gold Professional Edition on a single computer or on multiple computers on a network.

Server

The network must be TCP/IP-based.

You will need to have one computer designated to host the student database. The supported database format is MySQL (which is provided on the Setup CD).

The computer acting as the server needs to meet the following requirements:

- 1GHz or better processor
- Mac OS 10.2 or higher
- 512 MB RAM baseline, plus at least an extra 256 MB for every 15-20 workstations (minimum **1GB**)
- 700 MB of free hard drive space
- A static IP address

Note: These requirements are for a server dedicated to My Reading Coach Gold. If the server is being used for other things, a faster processor and more RAM may be needed.

Note: Mac OS 10.4 *Server* and above would require a special setup CD. Please note this when ordering to avoid delay. (This only applied to the Server OS.)

Workstation

Each workstation must meet the following requirements:

CPU	1GHz or better
Operating System	Mac OS 10.2 or higher
RAM	256 MB
HD Free Space	4 gigabytes (GB)
Color Setting	16-bit ("Thousands") color or better

Recommended: Printer; Headphones (strongly recommended)

Optional: Microphone

Note: If My Reading Coach Gold is only going to be installed on one computer, then use the Workstation requirements, except it would need 512mb of RAM and 4.5 gigabytes of free hard drive space.
